### SMALL INTESTINE

- From the stomach, the food now enters the small intestine.
- This is the longest part of the alimentary canal which is fitted into a compact space because of extensive coiling.
- The small intestine is the site of the complete digestion of carbohydrates, proteins and fats.
- It receives the secretions of the liver and pancreas for this purpose.
- The food coming from the stomach is acidic and must be made alkaline for the pancreatic enzymes to act.
